

Title

Registered Protocol For The Planned Evaluation for a graded activity programme in chronic low back pain: a mixed-methods implementation report

Abstract

researchers evaluated a graded activity programme for adults with chronic low back pain. Participants will be recruited at urban and regional clinical sites; the planned sample is 191 and pain-related function is the principal endpoint. The protocol prespecifies safety, adherence, and quality-of-life measures and describes procedures for missing observations. Generalisability may be reduced because participating sites had established research infrastructure. A prespecified sensitivity analysis produced estimates in the same general direction. This report is from a parallel-group randomized controlled trial comparing Control: routine care vs Intervention: inhaled anti-inflammatory therapy + pharmacist medication review.
