

Title

Comparative effectiveness of structured medication review for heart failure with preserved ejection fraction: a prespecified analysis of outcomes

Abstract

An outpatient research network tested structured medication review against standard care in 228 adults with heart failure with preserved ejection fraction. The observed difference was clinically interpretable for symptom burden, while treatment exposure and adverse events were broadly comparable between groups. The study was not powered to detect uncommon adverse events. Differences in adherence were more pronounced among participants recruited through community services. This report is from a parallel-group randomized controlled trial comparing Control: usual care vs Intervention: pharmacist medication review + telemonitoring coaching.
