

Title

Correction: Personalised Dietary Counselling and systolic blood pressure in hypertension: a multisite patient follow-up

Abstract

This notice corrects a nonclinical metadata error in an earlier report on personalised dietary counselling for hypertension. The participant population, intervention, comparator, analyses, and clinical conclusions are unchanged. The corrected record clarifies the outcome definition and preserves the original study context for evidence review. Results were broadly stable after adjustment for age, baseline severity, and prior treatment. This report is from a parallel-group randomized controlled trial comparing Control: routine care vs Intervention: mindfulness sessions + educational material.
