

Title

Registered Protocol For The Planned Evaluation for structured medication review in heart failure with preserved ejection fraction: a health-system perspective

Abstract

researchers evaluated structured medication review for adults with heart failure with preserved ejection fraction. Participants will be recruited within a pragmatic network of hospital and community providers; the planned sample is 141 and symptom burden is the principal endpoint. The protocol prespecifies safety, adherence, and quality-of-life measures and describes procedures for missing observations. Generalisability may be reduced because participating sites had established research infrastructure. The report distinguishes protocol-defined outcomes from exploratory measures collected during follow-up. This report is from a parallel-group randomized controlled trial comparing Control: placebo education vs Intervention: telemonitoring coaching + dietary counselling.
