

Title

Registered Protocol For The Planned Evaluation for structured medication review in heart failure with preserved ejection fraction: a study of care access and outcomes

Abstract

the trial team compared structured medication review for adults with heart failure with preserved ejection fraction. Participants will be recruited within a pragmatic network of hospital and community providers; the planned sample is 198 and symptom burden is the principal endpoint. The protocol prespecifies safety, adherence, and quality-of-life measures and describes procedures for missing observations. The findings should be considered alongside short follow-up and incomplete adherence data. The study team documented variation in delivery intensity across participating sites. This report is from a parallel-group randomized controlled trial comparing Control: wait-list care vs Intervention: dietary counselling + mindfulness sessions.
