

Title

Retraction notice: 'Continuous glucose monitoring systems improve measurement precision...'

Abstract

The authors are retracting this article due to data irregularities identified during post-publication verification of the raw dataset. Specifically, discrepancies between source documentation and reported glucose values were discovered in approximately 8% of measurements, suggesting potential transcription errors or equipment calibration problems that compromise result interpretation. The corresponding author and institution are investigating the matter. Readers should not rely on the reported accuracy metrics or clinical recommendations pending resolution.
