

## Title

Correction to: Combined Scaling and Photobiomodulation Therapy Augments Arterial Hemodynamic Adaptation in Treated Periodontitis

## Abstract

In the published results article, Figure 2 incorrectly labeled the mechanical-only group's shear stress measurements as representing absolute values when they reflected normalized percentage change from baseline. The corrected figure indicates the mechanical-only group exhibited a mean absolute wall shear stress of 2.7 Pa (previously labeled 1.8 Pa), while the combination group measurements remain as reported. This correction does not alter the statistical significance of between-group comparisons or the primary conclusion regarding superior hemodynamic adaptation with combination therapy.
