

Title

Correction: Adjunctive Individualized Cognitive-Behavioral Therapy Substantially Improves Psychological and Sleep Outcomes in Fibromyalgia

Abstract

The originally published results article contained an error in the secondary outcome table labeling. The Beck Hopelessness Scale median score for the routine-care-only group at baseline was listed as 9.0 when the correct value is 12.0. This typographical correction does not affect the statistical significance of the between-group comparison ($p = 0.009$) or any interpretation of the study's conclusions regarding cognitive-behavioral therapy benefit. All primary outcome analyses remain unchanged.
